Sprint Plan 1					
Group A					
User story	Task	Task assigned to	Estimated effort (scale 1-5; low to high)	Priority (scale 1-5; low to high)	Notes
As a product owner, I want to have a product vision from the group that creates my product, so we can determine whether what I need/expect is understood.	Create product vision	Lizzy/Bjorn	3	5	
As a product owner, I want a product that we can extend independently after the deliverment and clear defined code	Determine which design patterns we will use	Martijn	4	3	
	Create UML for the code	Daan	3	3	
	Create a clear and useful structure for the application	Martijn	4	3	
	Agreements report on design patterns and structures	Daan	2	3	
As a user, I want the application to accept and handle txt input files.	Create configuration XML files for specifying the structure of the input files	Adam	4	2	
	Parse file based on the given regex of the structure	Adam	4	2	

Justification of priorities

The product vision is basis of the project, so we have a clear foundation of what our product will be. So it has the highest priority. After that we will have to make a structure for the software so we have a vision of how the program is going to work. The txt input handling, has the lowest priority, but it is a part of the program which we can start on.
